

SAGE GROUSE

The first modern sage grouse hunting season was held in 1955. Between 1955 and 1980, the season was open only about half the years, primarily during the 1970s, and seasons were restrictive. Length of season ranged from 2 to 7 days, with many seasons held during the week with daily bag limits of 1 or 2 birds. In 1980, the population was declining and continued to decline until the mid-1980s. It then stabilized with some fluctuations from year to year. Currently, the population is considered too low to support having a hunting season. The sage grouse hunting season was re-opened in 2000, closed again in 2013, re-opened in 2016, and closed again in 2017.
